

Dan Patch 1:55

The WORLD FAMOUS PACING STALLION

THE FASTEST HARNESS HORSE
THE WORLD HAS EVER SEEN

This Photograph was made of Dan Patch in one of his marvelous flights of speed and shows every foot off of the ground. It is one of the finest "Motion Pictures" ever taken and shows the wonderful Dan as true as if you saw him coming down the track. Dan Patch is owned by Mr. SAVAGE, Proprietor of "International Stock Food Co." and also of "International Stock Food Farm," of 700 acres, 10 miles from Minneapolis, Minn. ~~As~~ A Large, 6 Color, Reproduction Of This Photograph Will Be Mailed To You Free If You Write Us And State How Many Head Of Stock You Own. It is a Beautiful Horse Picture.

HORSE BREEDING.

EVERYONE knows that to successfully breed or raise horses requires the exercising of good judgment. It requires too much money to develop and train trotters to make it profitable for the farmer. But

he could do the breeding and sell the youngsters to others to develop. There is big money in it for him and he will not have to neglect his farm; but when he gets the racing fever, he makes a very poor farmer. If you own a mare well bred in trotting lines it will pay to breed to the best stallion you can. Her colts will always sell high for drivers and you may raise one worth \$5,000 to \$10,000. Select your best mares and breed only from well bred sires.

SPEED PRODUCERS.

IN glancing over pedigrees we find that our greatest trotters have descended from Imported Messenger, and Imported Bellfounder and down through Hambletonian. The original source of our best blood was in

Imported Messenger, whose descendants have become noted throughout our country. Messenger was inbred and combined the richest blood of English race horses with the pure Arabian blood, which had been carefully bred for hundreds of years. Imported Bellfounder was not a pure thoroughbred, yet he was a wonderful performer at the trotting gait for his day. In 1820 he trotted two miles in six minutes, the next year he trotted nine miles in twenty-nine minutes and thirty-eight seconds.

00724834

RYSDYK'S HAMBLETONIAN.

The descendants of this horse have raised the trotting horse to his highest perfection. In him we have the blood of

Messenger and Bellfounder united. Rysdyk's Hambletonian has become the most noted as a sire of marvelous speed, and also that his descendants were able to transmit great speed to their offspring. The history of this one division of the trotting family would require a large book. One thing very sure is that where you find great speed, you will find the blood of Imported Messenger and Hambletonian in liberal proportions. When you trace the breeding of the Bashaws, Clays, Morgans, Hambletonians, Blackhawks, Mambrinos, Pilots, Blue Bulls, American Stars, etc., you will find that their pedigrees cross and re-cross. The one horse which stands pre-eminent as the foundation of our trotters is Rysdyk's Hambletonian.

"International Stock Food" will give any horse more nerve power, speed and endurance.

MORGANS.

Care in selection and breeding has given the Morgan horse an enviable reputation. The Morgans have fine action, good tempers and sound constitutions, and if they could have had the advantages that other families have had they would have shown a much larger number of fast performers. Ethen Allen was one of the most celebrated of the Morgans. He was small, but a beautiful horse, and a very rapid goer for his day. His style and action were perfect. He was the fastest stallion that had ever been trained. As a three-year-old he trotted in 2:36, which was the fastest time for that age.  **"International Stock Food" makes stallions surer and makes brood mares raise better colts.**

THE CLYDESDALE.

REARED and originating in England and Scotland, this is an English-Scotch breed, of large bone and substance and great power.

The Clydesdale has a mild eye, with the forehead broad between the eyes. The ears are long, jaw broad and strong, nostrils large. As the neck swells to the shoulder it has large development of muscle on top. The breast is broad and full; from the arm to the knee the leg is long, and from knee to fetlock it is short. The leg is inclined to be covered with long hair below the knee. The back is of medium length. The body is round and well ribbed. The quarters are broad, thighs large and muscular, backs clean and well developed; lower part of limbs are flat, showing good development in muscles and tendons.  "International Stock Food" makes colts grow rapidly even during the most severe weather. It keeps them healthy and vigorous.

3 FEEDS ONE CENT THOROUGHBREDS.

The English thoroughbreds are horses of long and proud lineage. These horses have long been famous for their great speed and endurance. The foundation was surely obtained from the Arabian horses. Kings and nobles have put forth every effort to improve this animal which is their pride. The American thoroughbred is a descendant of the English and is his equal if not superior.  "International Stock Food" gives a horse more "nerve power" and this is what wins races.

THE PERCHERON.

WHEN draft horses are mentioned the Percheron is certain to be high in the list. This particular breed has a head of medium length and wide between the eyes. The neck is arched and muscular. The back is short and strong; body round and close ribbed. The hind-quarters are broad and strong, the shoulders very muscular.

It is very difficult to draw the line between Norman and Percheron. In the Stud book all animals imported from France are registered as either Normans, Percherons, Percheron-Normans or Norman-Percherons.  "International Stock Food" saves one quart of oats every feed and keeps work horses in better condition.

SOME COMMON HORSE DISEASES AND BLEMISHES.

THRUSH—is a disease of the frog, which often becomes rotten. "International Honey-Tar Foot Remedy" is the finest preparation ever put on the foot of any horse. It restores the natural, healthy condition.

THOROUGHPIN—is caused by hard work and has the nature of Bog Spavin. Puffs are located in front of the hock and appear to be filled with air which can be pressed back and forth. Seldom causes lameness.

CURB—is an enlargement on back part of hock, sometimes half an inch thick. Caused by a sprain. We guarantee a cure, while your horse works, by the use of "International Compound Absorbent."

BONE SPAVIN—is a disease of the hock joint, and soon develops a bony lump in the joint which causes lameness. It is generally started by a sprain. "International Compound Absorbent" stops the lameness.

BLOOD SPAVIN—Is caused by a distension of the vein passing over a bone spavin.

BOG SPAVIN—is an enlargement of the hock. It can be helped, but rarely cured. Caused by sprain and following inflammation. A groom may cause it by sticking the horse in the hock with a fork.

RING-BONE—is an enlargement on the pastern. Sometimes it passes entirely around the leg. Often the enlargement grows until permanent lameness is caused. Generally caused by a sprain or blow.

SPLINT—is a bony growth on the cannon bone below the knee. Usually appears on fore leg, but sometimes on hind leg. Generally causes lameness when forming, but seldom causes any trouble after becoming hard. Splint is very common. Caused by a sprain of the ligaments, which are located between cannon and splint bones.

CHAPPED HOCK OR ELBOW—are swellings something like tumors. They are filled with a watery secretion. It is caused by bruising and often becomes a large and unsightly swelling. Cured by "International Compound Absorbent."

FLATULENT COLIC—is caused by the process of digestion being stopped and the food fermenting and forming gas which causes the horse to bloat. "International Colic Cure" is put up in regular drenching bottle and is guaranteed to cure colic in ten minutes. Your money will be refunded if it ever fails.

COLIC—is a pain in the colon. It is serious and is apt to terminate in inflammation of the bowels. It is called spasmodic because there are intervals when there is no pain. This contraction of the muscular coat of the bowels is very painful. Caused by something irritating in the bowels. "International Colic Cure" is guaranteed to cure it in ten minutes.

MANY of the prominent cattlemen of today pin their faith in the "Dod-dies" and winnings of this breed the past few years serves to substantiate their judgment. The hornless breed of cattle known by this name are natives of Angus, in the northeastern part of Scotland. They are black in color, and are rapidly gaining ground on the horned cattle because of these qualities, combined with their quietness and the ease with which they are managed.

THE HEREFORDS.

GREAT strides have been made by the breeders of the white faces in the past few years and the breed is certainly a most excellent one. These cattle take their name from the County of Hereford, England, where it originated. The Herefords are beautifully marked with red and white. They are a hardy, mild, early maturing breed. The flesh is superior to most breeds. The forehead is broad; eye full and mild; head small; horns spreading; neck long; chest deep and broad; back broad and level; ribs broad and strong; body round and full; legs short and strong; flesh soft; hair bright and silky.

SHORT-HORNS.

The term Short-Horn is applied to the descendants of the Durham cattle which were originally of Durham County in the northern part of England.

What called special attention to this breed was the celebrated "Durham Ox" which weighed 3780 pounds. The ox was of remarkable size and possessed very fine points. Short-Horns should have a small head, flat forehead and the face should taper to a fine muzzle and open nostrils. The eye should be bright and quite large. A medium sized ear is to be preferred and the horns ought to be well set with slight curve forward. The neck should be of medium length and run neatly into the shoulders. The chest ought to be deep and broad. The body ought to be large but symmetrical; back should be wide and straight from neck to tail with the line of the belly nearly so; the ribs barrel-shaped and the rump long and wide. The color is generally red or red and white. Always select an animal with a square body as they are more easily fattened than lengthy animals. The legs ought to be short, straight and well under the animal. The skin should be thick, soft and elastic; the hair thick, soft and fine.

RED POLLED CATTLE.

THEY were imported from Norfolk and Suffolk counties, in England. They are a deep, rich red color, and the cows always possess good dairy qualities. Their color and absence of horns is the sure marking of this herd.

GALLOWAY CATTLE.

FEW breeds have more ardent supporters than the lovers of this shaggy breed. These cattle are closely related to their neighbors, the Aberdeen-

Angus breed. The polled cattle of Galloway and western coast of Scotland are "pure bred" from the fact that outside breeds have not been mixed with the native cattle. They are principally beef cattle. They are straight and broad in the back, and nearly level from head to tail; ribs and body are round and full; legs short with good bones; deep broad chest; head is inclined to be heavy; eyes not prominent and ears large and full; skin loose, medium thickness, and fine black hair.

BULLS.

Any bull will sire a very much better class of healthy, vigorous calves if he is fed "International Stock Food" during the breeding season. It will keep him healthy

and he will sire more and better calves.

3 FEEDS ONE CENT

QUICK FEEDERS FOR MARKET.

On your ability as a feeder depends your success in the cattle business. If you would feed "International Stock Food" every day to your calves right along and crowd them for market a much larger profit would be made than is made by the usual method of fattening. The reason for this is because "International Stock Food" will keep the digestion, assimilation and entire sys-

tem in perfect condition so that the animal will obtain a larger per cent of flesh and fat-forming elements from a certain amount of grain. We positively guarantee that you will make \$36c net profit, over its cost, in feeding one ton of "International Stock Food" and in feeding a smaller amount you will make the same proportion of extra money. Every stockman knows that a large per cent of food passes through most animals without their deriving any benefit from it because the digestive organs are not in perfect condition. Cattle very often suffer from dyspepsia and as long as any animal has this disease it is impossible to fatten profitably. "International Stock Food" has never been equaled as a perfect remedy for dyspepsia in animals and it gives remarkable results in purifying the blood and in "toning up" the entire system. If you are crowding your steers for the market the addition of "International Stock Food" to their regular feed will be very profitable, not only in aiding them to get more benefit from their regular feed, but also because it will greatly reduce the time necessary to prepare for market. Most feeders allow their calves to stop growing, especially during the first winter and very often during the second winter. It is a well proven fact that any animal that has been allowed to stop growing even for 30 days will never make as good an animal or pay the feeder as large a profit. "International Stock Food" added to skim milk or added to ground corn and oats, etc., will make calves grow very fast, and if the use is continued they will not stop growing a single day, even through the most severe winters and you can market them at two years of age as large as the average three year old.

THE GUERNSEYS.

The Guernseys are related to the Jerseys, but are larger, better feeders and better built, and fatten off much more readily and are more valuable when wanting to turn them off for beef.

THE JERSEYS.

ISLANDS in the British Channel, three in number, the Jersey, Guernsey and Alderney, are each the home of these three most excellent breeds of dairy cattle. The cattle on these islands are guarded very carefully and never crossed, and the breeds are known by the names of the islands from which they are imported. Jersey is the largest island and the Jerseys are by far the most noted. The head is fine; face slightly dished; eye clear, full and mild; the horns are short but curving inward slightly; the ear medium, thin and quick in movement. The general appearance of the head is of being well bred. The legs are slender, ribs flat, back slightly depressed, rump and tail high. In the cow the udder is larger and square and covered with soft, silk hair; teats small and fine but standing well apart; milk veins very prominent. The color is generally red or fawn with some black markings. The bone is fine and they generally carry but little flesh. They are noted for their peculiar richness in cream and the fine quality of rich, well-flavored butter it produces.

HOLSTEIN-FRIESIAN CATTLE.

This breed dates back for over 2,000 years. Their genealogy is pure further back than any other breed. Cows will average 1,100 to 1,200 pounds, and they possess great capacity for the production of milk and cheese. North Holland and the Netherlands are claimed as the land of nativity of this Dutch breed. Their color is generally spotted white and black; neck inclined to be short; head narrow and long; fine horns and large projecting ears. They are broad across the hips; legs strong and straight; tail fine and long.

THE AYRSHIRES.

These cattle are noted for giving large quantities of milk, rich in cheese and butter. They are gentle and of good constitution. The eye is full and placid; ears fair size and thin; horns of medium size and fine texture. Back should be straight; tail long and set on level with back; limbs should be flat-boned and not large. The colors are brown, red and white.

YOUR BABIES NEED THE BEST MILK.

"International Stock Food" gives extraordinary good results when used for cows. By chemical test and by the usual test it can be fully demonstrated that when "International Stock Food" is used for cows the milk will be more healthful for human use. This superior medicated food "tones up," invigorates, purifies the blood, etc., and removes all taint of disease from the milk and makes it a more perfect food. Milk from cows fed "International Stock Food" often commands a higher price on that account, as diet for babies. Babies fed such milk will be stronger and more healthful. The pure vegetable ingredients we use are perfectly harmless, and their qualities will make any milk better for human use. Milk is a very important article of food, and should be as healthful as possible, specially when used for small children. Such milk will convey some of the healthful elements of the vegetable ingredients we use into the systems of your children and they will be stronger to ward off disease. "International Stock Food" will increase the supply of rich milk; keep the cow glossy, the skin healthy and the general system in good condition. Feed "International Stock Food" to your cows and their calves will be stronger and better. "International Stock Food" will never taint milk, cream, butter or cheese. When the milk is in bad condition a short feeding of "International Stock Food" will correct the condition and make it sweet, pure and fresh.

DAIRYMEN.

Under almost any conditions "International Stock Food" will increase the supply of milk in proportion to the condition of the cow. If she is run down it often doubles the supply of milk in a short time. It is nothing unusual for "International Stock Food" to increase the supply of milk from one to three quarts per day, which makes the use a very profitable investment. If the cow is in good condition and has abundance of the best of all kinds of milk-producing food you cannot expect such a large increase, but "International Stock Food" cannot be fed to any cow without showing a marked increase in richness of milk, and an increase in the supply. An impartial chemical or practical test will prove this statement. No dairyman can afford not to feed his cows "International Stock Food." It will keep his cows healthy and increase his profits by largely increasing the supply. Separate two lots of cows and feed one "International Stock Food" and if that lot does not show paying results over the other lot any of our agents are authorized to refund your money. There is no question but what "International Stock Food" is the safest, by far the cheapest to use and most perfect medicated food ever prepared for milk cows. You can secure **3 Feeds for One Cent**, and paying results are guaranteed.

3 FEEDS ONE CENT FOR YOUR CALVES.

"International Stock Food" gives remarkable results when used for calves. Most farmers try to raise calves on skim milk, but skim milk alone is a poor diet for good growth. The farmers who will take skim milk and some ground feed and add "International Stock Food" as directed can show a growth that will astonish his neighbors. It will prevent skin diseases, scours, indigestion, etc., and give perfect health. It is especially adapted for young

animals, as it is purely vegetable and causes extra good bone, muscle and flesh. "International Stock Food" is absolutely harmless, and can be fed every day with perfect safety. You can make a much larger profit by feeding "International Stock Food" to your calves. In some cases creamery skim milk seems to have a tendency to cause scours in calves. "International Stock Food" will correct this at once and quickly cures scours or prevents it if fed right along. A test will quickly show you that a much larger profit can be made by feeding "International Stock Food" every day over the usual plan of growing calves.

Be sure and test it for your Calves. You will be surprised at the paying results.

DYSPEPSIA.

Most people suppose that animals are not afflicted with Dyspepsia, but all domestic animals suffer more or less from this distressing disease. It can be known by a poor appetite, rough coat and loss of flesh. "International Stock Food" is undoubtedly the most reliable preparation in the world for this disease, and never fails to give beneficial results.

ANTHRAX.

This is often termed Black Leg, Bloody Murrain, etc. It is in the nature of an Epizootic and often arises spontaneously in low, damp fields. The blood is black and thick. The liver and lymphatic glands enlarge and become soft. The general tendency is toward gangrene and decomposition of the parts affected. It often affects the leg or quarter and death is very sudden. It is very rare that the disease can be cured.

TUBERCULOSIS.

This is very similar to Pulmonary Consumption in the human family and is a disease that is more common in cows than other cattle. Appetite is capricious; hair looks dull; dry cough; indigestion and diarrhoea soon follow and the animal is

greatly reduced in flesh. The flesh soon gets unfit for human use. If your veterinary surgeon pronounces your cattle afflicted with Tuberculosis the best thing to do is to kill them at once, as it is almost impossible to effect a cure. Keep the system of your cattle strengthened by feeding "International Stock Food" if you wish to avoid disease.

SCOURS.

This is caused by an acute attack of indigestion. "International Stock Food" will restore a healthful condition of the stomach, liver and bowels.

3 FEEDS FOR ONE CENT

BERKSHIRE HOGS.

ASIA, Africa and Europe have been known as the home of the wild hog for centuries, but his nativity is lost in the dim past. The Berkshire hog is noted as a type of perfect breed-

ing. They are generally pure black, but sometimes are slightly spotted with white. Have a very short face and well dished; ears erect, thin and soft; back broad and straight; ribs long and well rounded; legs short and fine, but very strong.

THE YORKSHIRE HOG.

This hog is probably the leading English white breed. They are strong, vigorous and excellent breeders. They are good nurses.

Easily fattened. They can be early marketed at 175 to 300 lbs., or over.

THE POLAND-CHINA HOG.

There has always been a great deal of controversy in regard to the origin of this very valuable breed of hogs. Ohio is admitted to be the state where this hog originated and was developed for several years. They should have short legs, deep sides, straight broad back, full square hams and shoulders; short head, wide between the eyes; drooping ears; color black, with more or less white markings. They are vigorous, hardy, prolific and good sucklers.

THE CHESTER WHITE HOG

EVERY breeder of white hogs is familiar with the Chester White which came originally from Chester County, Pa. They are good sized and very easy fatteners. The hair is white and thin; body long and deep; legs short and strong; head and neck short; thin ears, lopping at the point.

TAMWORTH HOGS.

NEVER in the history of the hog has a breed made more rapid strides than this British breed. In color they are a bright sandy red. The breed is now famous for early maturity, while the long deep sides, light shoulder, and jowl are just what the pork packer requires. The flesh is lean, pink and delicious in flavor, the percentage of lean meat being very high.

A HOG is not naturally matured until he is two years old, but in this fast age we crowd him on the market at six or eight months of age and weighing from 150 to 300 lbs. This crowding process must weaken the system and in order to keep the animals healthy they must have some pure vegetable tonics, blood purifiers and general system invigorators such as they formerly obtained when running at large in the woods. "International Stock Food" contains these and the entire tendency is to give better digestion and assimilation to make pure rich blood, and to prevent disease. "International Stock Food" is entirely unlike any other preparation ever placed on the market for hogs, shoats or pigs.

STUNTED PIGS OR SHOATS.

It sometimes happens that a feeder will have a few stunted pigs, shoats or hogs in his herd and it is impossible to get them started to growing. "International Stock Foods"  3 Feeds for One Cent, will start them to growing immediately and make them grow or fatten very rapidly.

WORMS IN HOGS.

Many of the cases where hogs fail to thrive is on account of worms. When you suspect anything of the kind use "International Stock Food" at once. Largely increase the size of each feed of "International Stock Food" for one week as directed in "Special Book of Directions," which is in the top of every package, and it will free them from worms, thoroughly strengthen the system and start quick growth. Some breeders write that their yards were covered with worms after following this treatment. It is sure to expel all worms if our directions are followed. Your hogs will not thrive when greatly troubled with worms. "International Stock Food" only costs  3 Feeds for One Cent.

SYMPTOMS OF HOG CHOLERA— TREATMENT.

**You Must Follow These Special Directions
If Your Hogs Have the Hog Cholera.**

First symptoms are great debility and capricious appetites. You should separate the sick and apparently healthy at once; delay is very dangerous. Kill and burn those that are too sick to eat. It is extremely poor policy and dangerous to waste time on hogs that are too sick to eat.

Genuine malignant Hog Cholera cannot be fooled with, and demands heroic treatment without a moment's delay. Guard infested pens against all other animals. Do not go direct from the sick to the ones apparently healthy. Disinfect pens, nests, troughs, buckets, etc., with "International Pheno-Chloro," four tablespoons mixed with one bucket of water. A teaspoonful of "International Pheno-Chloro" mixed in every bucket of water or swill once per day will be very beneficial. Give them pure water. Feed the hogs that can eat easily digested food with two or three times the usual amount of "International Stock Food" mixed with slop and keep it up regularly four to five times per day for two or three weeks. Men of good judgment will not expect miraculous results, because they know that a diseased system cannot be changed nor a weak system thoroughly strengthened in three or four days. One 25-lb. pail of "International Stock Food" will not cure a herd of hogs nor show wonders if fed promiscuously to all your stock.

SUMMER FATTENING.

Summer and early fall is the ideal time to fatten hogs because they will make a more rapid gain. It takes a certain amount of food to supply the daily animal waste. The days of growth should be shortened so as to avoid the unnecessary waste. Market your hogs at six to eight months of age and you make a greater per cent of profit than your neighbor, who keeps his ten or twelve months, because you avoid 60 to 120 days of daily animal waste.

OW many pigs
do your sows
give you? "In-
ternation-
al Stock Food"
does not con-
tain a single
ingredient that
is poisonous

or that can prove harmful even if fed to a brood sow every day. It can be fed with perfect safety and very beneficial results to "breeders" both before and after farrowing. It will keep the sows strong and healthy, it will cause them to give more and richer milk, it will cause the pigs to grow much more rapidly, keep them healthy and vigorous and enable them to be weaned earlier. "International Stock Food" will strengthen a sow so that she can raise two litters per year of strong, healthy pigs.

3 FEEDS ~~FOR~~ ONE CENT EXTRAORDINARY PIG GROWER.

Skim milk or ground corn and oats, or ground oats and rye, or ground corn, oats and rye, with the usual feed of "International Stock Food" will cause pigs or shoats to grow as rapidly as new milk without "International Stock Food." Hog raisers everywhere testify that it makes pigs, shoats or hogs grow amazingly.

DO YOU RAISE FALL PIGS?

"International Stock Food" will take "Fall pigs" through the winter in good growing condition. Feed "International Stock Food" to them in connection with a combination of ground corn, rye and oats and they will not only be kept healthy, but they will make a growth that will astonish your neighbors.

PNEUMONIA IN HOGS.

It has been thoroughly demonstrated that in a very large number of cases hogs die with pneumonia instead of Hog Cholera. We have never claimed that "International

Stock Food" was a cure for this very fatal disease. When your hogs are dying do not claim that "International Stock Food" failed to cure Hog Cholera until you know that it is Hog Cholera instead of pneumonia. Hog Cholera is easier to cure than pneumonia.

**We guarantee 2250 Pounds Extra Gain for
50 Hogs in 90 Days.**

The average fattening hog when fed "International Stock Food" will make an extra gain of one-half pound or more per day over the usual plan of regular corn fattening. On fifty hogs this would amount to 750 pounds extra gain per month or 2250 pounds in 90 days. We invite a practical test, and if you do not find that the use of "International Stock Food" gives actual cash paying results your money will be refunded.

TO SWINE BREEDERS.

We are often asked if we guarantee "International Stock Food" to be a never failing cure for Hog Cholera. In reply to this will say that we do not claim it to be an infallible cure. The writer, who is originator of "International Stock Food," has had too much experience with medicines and also in raising hogs to ever make such a foolish claim. Only people of great ignorance or of unprincipled business methods ever made such foolish claims, because it is contrary to all medical science. No remedy has ever been discovered that would give infallible beneficial results either for animal or human use and such a remedy will never be discovered. Doctors have studied typhoid fever and many other diseases for hundreds of years, yet they lose many such cases. You cannot expect more of a remedy to feed animals than you do of one to give people. Doctors lose many cases, but sensible people do not claim that doctors are swindlers or frauds because some of their patients die. If we had as absolutely infallible remedy we could sell all we could make at \$10.00 per lb. instead

of 15 cents per lb. Our very fair offer is that in case "International Stock Food" fails for your hogs that our agent will refund your money so that it will not cost you a cent. You never had a fairer offer in your life. "International Stock Food" has gained a wonderful reputation, not only in causing a rapid growth and early market, but also as a cure and preventive of Hog Cholera and other diseases. We have thousands of testimonials from parties who claim that it will cure Hog Cholera in every case and that it has cured their hogs when badly afflicted with this terrible disease. We know that where our directions are strictly followed that "International Stock Food" gives remarkable results and will cure in a large majority of cases. We have backed millions of pounds with our Spot Cash Guarantee and failures have been very few. Yet we do not want you to think that we promise miraculous results. We simply offer you a reliable remedy and tell you plainly that it will give you paying results or will not cost you a cent. "International Stock Food" never fails in giving rapid growth for pigs or shoats and paying results for fattening hogs. It is prepared from pure vegetable, medicinal ingredients which stimulate and "tone up" the stomach, liver and bowels, give pure rich blood, sharpen the appetite, give good digestion, perfect assimilation, and so thoroughly strengthens the entire system that the Hog Cholera Microbe cannot find lodgment and will be destroyed or thrown off without doing any harm to the animal. You are never free from the danger of Hog Cholera as the microbe is carried from herd to herd in many different ways and the disease is liable to break out in your herd most any day. As a preventive "International Stock Food" is unequaled and is as near perfect as any preparation can be.

In view of superior medication 100 lbs. of "International Stock Food" contains medicinal strength and number of feeds to equal 200 to 300 lbs. of the cheap and inferior kinds. We are the largest cash buy-

ers of medicinal ingredients for live stock in the world and buying such immense quantities for spot cash we are in a position to always obtain the freshest and best. We do not use cheap or inferior ingredients. Before using "International Stock Food" read carefully the 24-page book of directions which is placed in the top of every package.

SHEEP RAISING.

It is estimated that the production of wool alone amounts to \$50,000,000 per year. For mutton and wool the raising of sheep is very profitable and worthy the attention of every farmer.

Study the different breeds carefully and select the kind best adapted to your land and you will find sheep one of the most profitable things on your farm.

The use of "International Stock Food" insures a larger wool clip and a better lot of lambs each spring.

In fattening sheep it is generally a hard matter to get them to eat enough to quickly fatten, but the use of "International Stock Food" will increase the appetite, greatly aid digestion and assimilation, purify the blood, tones up the entire system, and fatten them in from 30 to 60 days' less time. Be sure and test "International Stock Food" for your sheep.

3 FEEDS FOR ONE CENT

IS WELL KNOWN

THROUGHOUT THE ENTIRE WORLD

INTERNATIONAL STOCK FOOD FARM

M. W. Savage, of Minneapolis, Minn., is sole owner of International Stock Food Co. and also of the world famous International Stock Food Farm of 700 acres 10 miles south of Minneapolis. He feeds "International Stock Food" every day to his world speed champion stallions DAN PATCH 1:55 $\frac{1}{4}$, DIRECTUM 2:05 $\frac{1}{4}$ and ARION 2:07 $\frac{1}{4}$. Also to his stallions ROY WILKES 2:06 $\frac{1}{4}$ and BUTTONWOOD 2:17 and to his one hundred high class brood mares and their colts. Also to his Coach Horses, Driving Horses, Pace Horses, Work Horses and all other stock. If "International Stock Food" is good for Dan Patch, the most wonderful stallion in the world, it certainly will be good for your horses and other stock. International Stock Food Farm promises to be probably the most noted Harness Horse Breeding Farm in the history of the world.

OUR TESTIMONIALS.

"International Stock Food" and our other preparations have been on the market for many years and we have many thousand testimonials on file in our office. In this small book we do not have room for them but refer you to our large, finely illustrated stock book which contains a large number.

This large book will be mailed to you free and postage prepaid if you will write us and request it and also state how much stock of different kinds you own.

\$1,000 CASH GUARANTEE.

We will pay you \$1,000 in cash to prove that our testimonials are not genuine. They are from men who would no more make a false statement than you would to your best friend.

All of our preparations are sold on a "Spot Cash Guarantee" to refund your money in any case of failure. Ask any one of our One Hundred Thousand Dealers. Ask Your Dealer.

3 BEAUTIFUL HORSE PICTURES FREE

If you want beautiful large, colored lithographs of Dan Patch 1:55 $\frac{1}{4}$ or Directum 2:05 $\frac{1}{4}$ and Arion 2:07 $\frac{1}{4}$ we will be pleased to mail them to you Absolutely Free and Postage prepaid if you will write us and request them and also Tell Us How Much of Each Kind of Stock You Own.
